1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

How The Hair Drug Test Works. The reason a hair follicle test works is simple: your hair needs blood to grow, and it gets that blood via the root of the hair follicle.. When you use drugs, traces of the drug are deposited directly from your bloodstream into and onto the hair shaft, via the hair follicle.
