System dynamics (SD) is an approach to understanding the nonlinear behaviour of complex systems over time using stocks, flows, internal feedback loops, table functions and time delays.

System dynamics - Wikipedia

This text presents the basic theory and practice of system dynamics. It introduces the modeling of dynamic systems and response analysis of these systems, with an introduction to the analysis and design of control systems.

1. INTRODUCTION In the tutorial on damped oscillations, it was shown that a free vibration dies away with time because the energy trapped in the vibrating system is dissipated by the damping.

In this study, we focus on one of the E3 type 1 i.e. top-down type models, AIM/CGE (Computable General Equilibrium) model where change in the travel demand depends on the elasticity of substitution and relative price. Several researchers have been using AIM/CGE as a core of climate change mitigation study (Hasegawa et al., 2013, Fujimori et al., 2014b, Fujimori et al., 2015).

Abstract. OBJECTIVE Current state-of-the-art artificial pancreas systems are either based on traditional linear control theory or rely on mathematical models of glucose-insulin dynamics. Blood glucose control using these methods is limited due to the complexity of the biological system. The aim of this study was to describe the principles and clinical performance of the novel MD-Logic ...
