Computational complexity theory is a branch of the theory of computation in theoretical computer science that focuses on classifying computational problems according to their inherent difficulty, and relating those classes to each other. A computational problem is understood to be a task that is in principle amenable to being solved by a computer, which is equivalent to stating that the ...

Rutgers Physics News Prof. Jak Chakhalian's group has used "atomic engineering" to realize a room temperature two-dimensional polar metal in superlattices of BaTiO₃/SrTiO₃/LaTiO₃. Polar metallic oxides, which sometimes are called "ferroelectric metals", are commonly defined by the coexistence of polar crystal structure and metallicity and were thought to be nonexistent.
