The liquid fluoride thorium reactor (acronym LFTR; often pronounced lifter) is a type of molten salt reactor. LFTRs use the thorium fuel cycle with a fluoride-based, molten, liquid salt for fuel. In a typical design, the liquid is pumped between a critical core and an external heat exchanger where the heat is transferred to a nonradioactive secondary salt.

In governance, sortition (also known as allotment or demarchy) is the selection of political officials as a random sample from a larger pool of candidates. The logic behind the sortition process originates from the idea that "power corrupts." [citation needed] For that reason, when the time came to choose individuals to be assigned to empowering positions, the ancient Athenians resorted to ...

Disadvantages of wind energy are good in number. Due to the limitations of wind energy, it is not a favorite choice of energy source. Some of the major disadvantages of wind energy are that; no electricity is produced if there is no wind, it is expensive to install, big acreages of land have to be used, and the turbines kill birds.
