In probability theory and statistics, the generalized extreme value (GEV) distribution is a family of continuous probability distributions developed within extreme value theory to combine the Gumbel, Fréchet and Weibull families also known as type I, II and III extreme value distributions. By the extreme value theorem the GEV distribution is the only possible limit distribution of properly ...

Intuition. Ordinary linear regression predicts the expected value of a given unknown quantity (the response variable, a random variable) as a linear combination of a set of observed values (predictors). This implies that a constant change in a predictor leads to a constant change in the response variable (i.e. a linear-response model). This is appropriate when the response variable has a normal ...

1. Introduction. Generalized anxiety disorder (GAD) is a highly prevalent, chronic, costly and disabling mental disorder (Tyrer & Baldwin, 2006). It is characterized by excessive and persistent worry and anxiety about everyday internal and external events, in combination with various psychological and somatic complaints, such as autonomic arousal, restlessness, fatigue, problems with ...
