Chapter 21-AP.pdf - Print Chapter 21 flashcards | Easy

Blood vessel, a vessel in the human or animal body in which blood circulates. The vessels that carry blood away from the heart are called arteries, and their very small branches are arterioles. Very small branches that collect the blood from the various organs and parts are called venules, and they unite to form veins, which return the blood to the heart.

Blood vessel | anatomy | Britannica.com

Anatomy of Blood Vessels Major Systemic Arteries and Veins of the Body 5. Use the key on the right to identify the arteries or veins described on the left. Some terms are used more than once. 1. the arterial system has one of these; the venous system has two 2. these arteries supply the myocardium 3. two paired arteries serving the brain 4. longest vein in the lower limb

REVIEW SHEET Anatomy of Blood Vessels - apchute.com

vessels that carry blood toward the heart, usually deoxygenated blood, less pressure in veins, 64% of blood is in veins, blood reservoirs Veins structure lumen is larger, calls of veins are thinner and have 1-way valves

Chapter 21 Cardiovascular System: Blood Vessels and

Blood carries nutrients and oxygen to all the body's cells and also carries the waste away from the cells to the organs of excretion Print E-mail Lymphatic System is made up of the lymph nodes, lymphatic vessels, lymph, and other lymphoid organs.
