### **Eucalyptus - Simple English Wikipedia, the free encyclopedia**

Eucalyptus regnans is widely known as the mountain ash, due to the resemblance of its wood to that of the northern hemisphere ash. Swamp gum is a name given to it in Tasmania, and stringy gum in northern Tasmania. Other common names include white mountain ash, giant ash, stringy gum, swamp gum and Tasmanian oak.

### **Eucalyptus regnans - Wikipedia**

ganic ashes which have at times been sold as a commodity [4,5]. With gasifier-based power plants, resultant fly ashes are comprised of both concentrated inorganic constituents and unburned carbon, the latter ranging from 10 to 60% of the fly ash by mass [6e8].

### **Analysis of the fly ash from the processing of wood chips**

Volatile terpenes in the leaves of Eucalyptus trees (including eucalyptol and citronellal) make them especially flammable. This massive fire was fanned by dry "Santa Ana" winds blowing from east to west (toward the coast), literally converting everything in its path into ashes and rubble.
