A polymer capacitor, or more accurately a polymer electrolytic capacitor, is an electrolytic capacitor (e-cap) with a solid electrolyte of a conductive polymer. There are four different types: Polymer tantalum electrolytic capacitor (Polymer Ta-e-cap); Polymer aluminum electrolytic capacitor (Polymer Al-e-cap); Hybrid polymer capacitor (Hybrid polymer Al-e-cap)

Petri net basics. A Petri net consists of places, transitions, and arcs. Arcs run from a place to a transition or vice versa, never between places or between transitions. The places from which an arc runs to a transition are called the input places of the transition; the places to which arcs run from a transition are called the output places of the transition.
