

### **bones genetics and behavior pdf**

It is not known whether Neanderthals were anatomically capable of speech, and whether they actually spoke. A once widely believed theory that the Neanderthal vocal tract was different from that of living humans, and that they hence probably could not speak, is now discredited. The only bone in the vocal tract is the hyoid, but being fragile, no Neanderthal hyoid was found until 1983, when ...

European early modern humans (EEMH) in the context of the Upper Paleolithic in Europe refers to the early presence of anatomically modern humans in Europe. The term "early modern" is usually taken to include fossils of the Aurignacian, Gravettian, Solutrean and Magdalenian, extending throughout the Last Glacial Maximum (LGM), covering the period of roughly 45,000 to 15,000 years ago.

The 13 species of finches that live in the Galápagos Islands evolved from a single common ancestor within the past 2 million to 3 million years. Although they may not seem to be all that different from one another, distinct species living on the same island generally keep to themselves and don't ...
