Invasive species occur throughout the lands and waters of the United States, and military lands are no exception. These invaders are a major and growing problem on military lands, impacting the ability to train the nation's armed forces, degrading ecosystem health of these public lands, endangering native biodiversity, and potentially causing harm to human health.

Invasive Species Management on Military Lands, Ch. 7

The effects of global warming are the environmental and social changes caused (directly or indirectly) by human emissions of greenhouse gases. There is a scientific consensus that climate change is occurring, and that human activities are the primary driver. Many impacts of climate change have already been observed, including glacier retreat, changes in the timing of seasonal events (e.g ...

What does gap analysis mean? A simple framework for assessment Jeffrey Parrish and Nigel Dudley In a conservation context, gap analysis is a method to identify biodiversity (i.e., species, ecosystems and ecological processes) not adequately conserved within a protected area network or through other effective and long-term conservation measures¹. It has developed over the past 15 years in ...

What does gap analysis mean? A simple framework for assessment

Biodiversity is important, more than just the 'I want my children to enjoy it' reason. For example, the richness of diversity allows medicines and foods to be naturally available. The natural disaster prevention mechanisms in most ecosystems and other free services we all get from the surrounding environment are not easily replaceable or replicable, so maintaining biodiversity is important.
