

conservation of momentum and pdf

Momentum is a measurable quantity, and the measurement depends on the motion of the observer. For example: if an apple is sitting in a glass elevator that is descending, an outside observer, looking into the elevator, sees the apple moving, so, to that observer, the apple has a non-zero momentum.

Momentum - Wikipedia

Angular momentum is a vector quantity (more precisely, a pseudovector) that represents the product of a body's rotational inertia and rotational velocity about a particular axis. However, if the particle's trajectory lies in a single plane, it is sufficient to discard the vector nature of angular momentum, and treat it as a scalar (more precisely, a pseudoscalar).

Angular momentum - Wikipedia

Impulse = Momentum Consider Newton's 2nd Law and the definition of acceleration Units of Impulse: Units of Momentum: Momentum is defined as $\Delta p = m \Delta v$
