2 Chapter 1: Getting Started Creating Cable and Harness Designs Lesson: Creating Cable and Harness Designs This lesson describes the process for creating a complete cable and harness design, how to create a harness assembly, and how and where to insert electrical parts.

Getting Started Creating Cable and Harness Designs

â€¢ Every wire segment on an aircraft should have its own unique identifier. Even the shield of shielded wire has its own unique identifier. Put simply, every conductor of current is uniquely identified. As an example, a twisted pair that is shielded and jacketed contains three conductors: the twisted pair and the outside shield.

Prepping a Harness. Again, this is a case where your new accessory came with a wiring harness of some kind. Take a moment to inspect it to be sure that it is truly ready to install, rather than get in the vehicle and start wiring it up only to find out that: Some or all of the wires are not long enough.

If you have a good wiring diagram, copy it and blow it up so that you can make clear notes and changes in the future. Anytime you change the wiring or electrical components, write it on the diagram. If you don't have a good diagram, or you're intimidated by the arcane electrical symbols on the one you have, make one from scratch using large paper.
