A light-emitting diode (LED) is a two-lead semiconductor light source. It is a p-n junction diode that emits light when activated. When a suitable current is applied to the leads, electrons are able to recombine with electron holes within the device, releasing energy in the form of photons. This effect is called electroluminescence, and the color of the light (corresponding to the energy of ...

## **Light-emitting diode - Wikipedia**

CRI 90+ True Color Lighting Britelum's LED undercabinet lights with CRI 95 paves the way for a true and natural color experience. The sun is the most natural light we have with CRI 100, therefore it is the standard of comparison for any light source.
