

## **distributed information system as pdf**

A distributed operating system is a software over a collection of independent, networked, communicating, and physically separate computational nodes. They handle jobs which are serviced by multiple CPUs. Each individual node holds a specific software subset of the global aggregate operating system.

## **Distributed operating system - Wikipedia**

Distributed computing is a field of computer science that studies distributed systems. A distributed system is a system whose components are located on different networked computers, which then communicate and coordinate their actions by passing messages to one other. The components interact with one other in order to achieve a common goal. Three significant characteristics [why?] of ...
