contrast the following experimental designs: randomized controlled trials, crossover, factorial, and Solomon four group designs. Discuss the advantages and disadvantages of various experimental designs. Compare and contrast the nonequivalent control group and interrupted time series designs. Discuss the advantages and disadvantages of various quasi-experimental designs.

Quantitative Research Designs: Experimental, Quasi

3 A single blind experimental design is one where the subjects do not know if they are receiving the treatment or a placebo. What is a double blind experimental design? 4 What might be the advantages and disadvantages of 'blinding'? 5 Devise a diagram to try to demonstrate the possible relationships between the above components.
