A geographic information system (GIS) is a system designed to capture, store, manipulate, analyze, manage, and present spatial or geographic data. GIS applications are tools that allow users to create interactive queries (user-created searches), analyze spatial information, edit data in maps, and present the results of all these operations.

The Environmental Considerations GIS (ECG Tool) was built to help identify what types of environmental geographic data may be found at specific locations. When determining whether to buy or build on a property, residents, visitors and business owners should consider what potential environmental impacts, if any, there might be to the property.
