Three-dimensional space (also: 3-space or, rarely, tri-dimensional space) is a geometric setting in which three values (called parameters) are required to determine the position of an element (i.e., point). This is the informal meaning of the term dimension.. In physics and mathematics, a sequence of n numbers can be understood as a location in n-dimensional space.

A contour line (also isoline, isopleth, or isarithm) of a function of two variables is a curve along which the function has a constant value, so that the curve joins points of equal value. It is a plane section of the three-dimensional graph of the function  $f(x, y)$  parallel to the  $x, y$  plane. In cartography, a contour line (often just called a "contour") joins points of equal elevation (height ...
