"the physical description of the water body (hydrology, dimensions, nature of lake bottom or river bed, etc.). Complete assessment of the quality of the aquatic environment, therefore, requires that water quality, biological life, particulate matter and the physical characteristics of the water body be investigated and

evaluated.

Monitoring and modelling catchment water quantity and quality

Subsurface drainage alters field hydrology, which can have both positive and negative impacts on downstream water quantity and quality. A key concern is to what extent does subsurface drainage contribute to downstream flow alterations and flooding through changes in the amount and timing of water leaving the field.
