Indeed, the reason for the importance of the numerical methods that are the main subject of this chapter is precisely that most equations that arise in real" problems are quite intractable by analytical means, so the computer is the only hope.

Lecture 16 Numerical Methods for Eigenvalues As mentioned above, the eigenvalues and eigenvectors of an $n \times n$ matrix where $n \geq 4$ must be found numerically instead of by hand. The numerical methods that are used in practice depend on the geometric meaning of eigenvalues and eigenvectors which is equation (14.1). The essence of all these methods is
