

In engineering, deflection is the degree to which a structural element is displaced under a load. It may refer to an angle or a distance. The deflection distance of a member under a load is directly related to the slope of the deflected shape of the member under that load, and can be calculated by integrating the function that mathematically describes the slope of the member under that load ...

Deflection (engineering) - Wikipedia

The Customs Strike in Brazil that begun on May 14 has now concluded. Operations have returned to normal and shipments destined to, or transiting through, GRU are no longer subject to delay.

En ingeniería, se llama resiliencia de un material a la energía de deformación (por unidad de volumen) que puede ser recuperada de un cuerpo deformado cuando cesa el esfuerzo que causa la deformación. La resiliencia es igual al trabajo externo realizado para deformar un material hasta su límite elástico: $= \hat{\epsilon}$ « Para una probeta de material elástico lineal sometida a tensión axial ...
