Aluminium or aluminum is a chemical element with symbol Al and atomic number 13. It is a silvery-white, soft, nonmagnetic and ductile metal in the boron group. By mass, aluminium makes up about 8% of the Earth's crust; it is the third most abundant element after oxygen and silicon and the most abundant metal in the crust, though it is less common in the mantle below.

The aircraft design process is the engineering design process by which aircraft are designed. These depend on many factors such as customer and manufacturer demand, safety protocols, physical and economic constraints etc. For some types of aircraft the design process is regulated by national airworthiness authorities.

Piping vibration and fatigue can account for up to 20% of hydrocarbon releases; and a large portion of those are due to failure of small-bore connections per Energy Institute, 2008, Guidelines for the avoidance of vibration induced fatigue failure, (AVIFF). Hydrocarbon emissions can lead to fire, explosions, injuries, property and environmental damage, and penalties.
