Distillation is the process of separating the components or substances from a liquid mixture by using selective boiling and condensation. Distillation may result in essentially complete separation (nearly pure components), or it may be a partial separation that increases the concentration of selected components in the mixture.

In engineering, the mass transfer coefficient is a diffusion rate constant that relates the mass transfer rate, mass transfer area, and concentration change as driving force:  $N = K_c A \Delta C$  Where:  $K_c$  is the mass transfer coefficient [ $\text{mol}/(\text{s}\cdot\text{m}^2)/(\text{mol}/\text{m}^3)$ ], or  $\text{m/s}$   $N$  is the mass transfer rate [ $\text{mol/s}$ ]  $A$  is the effective mass transfer area [ $\text{m}^2$ ];  $\Delta C$  is the driving force concentration difference [ $\text{mol}/\text{m}^3$ ].
