Dissociative identity disorder (DID), formerly known as multiple personality disorder, is a mental disorder characterized by at least two distinct and relatively enduring personality states. There is often trouble remembering certain events, beyond what would be explained by ordinary forgetfulness. These states alternately show in a person's behavior; presentations, however, are variable.

Understanding the Archetypes involving the eight functions of type (Beebe model) The key to understanding exactly how functions play out in each of MBTI's 16 types is the archetypes. Jung's larger theories included hundreds of archetypes, which are "character roles" of sorts (model of a hypothetical person in a particular role), within the psyche.
