Introduction- STEAM POWER PLANT: A thermal power station is a power plant in which the prime mover is steam driven. Water is heated, turns into steam and spins a steam turbine which drives an electrical generator. After it passes through the turbine, the steam is condensed in a condenser and recycled to where it was heated; this is known as a Rankine cycle.

Thermal expansion is the tendency of matter to change in shape, area, and volume in response to a change in temperature.. Temperature is a monotonic function of the average molecular kinetic energy of a substance. When a substance is heated, the kinetic energy of its molecules increases. Thus, the molecules begin vibrating/moving more and usually maintain a greater average separation.

Anna University Engineering Notes Regulation 2013 of All Engineering Departments is available here. The New Revised Syllabus of Notes covered Portions and had an Important 2 marks and 16 marks Questions with Answers. Anna University Engineering Notes Anna University Engineering Notes for all Semester 1,2,3,4,5,6,7 and 8 are available here.

Anna University Engineering Notes Regulation 2013

Overview. Thermal radiation, also known as heat, is the emission of electromagnetic waves from all matter that has a temperature greater than absolute zero. It represents the conversion of thermal energy into electromagnetic energy. Thermal energy consists of the kinetic energy of random movements of atoms and molecules in matter.

"Thermal comfort mediates behavioral modification of heat loss, the most important thermoregulatory response in humans. Thermal comfort is determined by skin-surface temperature, not by tissue heat content, cutaneous heat flux, or central temperature. However, comfort produced by a local thermal stimulus depends both on the location of the stimulated skin and the rate of temperature change.

Thermal Shock Resistance is an ability of material to withstand sharp changes in temperature.. If a ceramic material is rapidly cooled, its surface reaches the temperature of cooling environment and tends to contract (thermal contraction).
